Governments
for Sustainability

How things stand

Challenges and threats despite good environmental achievements

e.g. Land consumption
Air pollution
Noise & light pollution
Soil & land degradation
(erosion, compaction, substances)
Climate change & consequences
Bio-diversity losses

ICLEI
Local
Governments
for Sustainability

What is happening

- Slow progress. Or are we too ambitious?
- Too complicated procedures?
- Complicated verification?
- Too much detail – too little strategic overview?
- Too little integration with existing instruments and processes?
- Too little incentive?
- It is so difficult to change behaviour!
- Do voluntary schemes work?

ICLEI
Local
Governments
for Sustainability

Where things go?

Economic pressure leads to reconsideration of priorities.
Budget cuts are threatening progress with sustainable development.

- fulfilment of legal requirements
- cut-of of voluntary tasks
- cut-back of local environmental investments & staff
- opposition to new mandatory instruments

ICLEI
Local
Governments
for Sustainability

Cities need to adapt to uncertain and unintentional events

Treasure Oilspill

Battle to save oiled birds

Penguin rescue operation the world's biggest

- An environmental disaster was called when the oil tanker *Treasure* sank off Makhobosstrand on 23 June 2000. More than 1200 tons of oil leaked from the wreck, blackened the Cape beaches and threatened bird life on Robben and Dassen islands. Dassen Island, a nature reserve managed by Cape Nature Conservation, is home to the largest breeding colony of the threatened African penguin.
- Uncontaminated and oiled birds were evacuated from the islands because of the oil threat. More than 12 000 penguins were airlifted from Dassen Island alone, with Cape Nature Conservation staff and volunteers working around the clock.
- The disaster struck late in the peak breeding season. Orphaned chicks that could otherwise not fend for themselves, were rescued and placed in special chick rearing facilities.
- The uncontaminated penguins were transported to Cape Recife near Port Elizabeth to start their semianation of more than 600 km back to their breeding colonies. The first penguins returned within 10 days of their release.
- Penguins Peter, Perry and Pamela became household names when they were fitted with satellite transmitters. Their journey was tracked by scientists and followed enthusiastically on the internet and in the media.

THE PENGUIN TREK

World follows penguins'

● Nearly 30 000 volunteers and staff of conservation organisations cleaned and fed more than 20 000 oiled penguins at the South African National Foundation for the Conservation of Coastal Birds (SANCCOB) facilities at Rehoviv and Salt River. The birds were washed with a special solution. Weighing a minimum of 2,7 kg and with their plumage waterproof again, they were ready for release.

● What damage does oil do? An oiled penguin loses its waterproofing and can die of cold when it goes to sea. It cannot fish and can starve or die of dehydration. Ingested oil causes irritation of the mouth and the stomach, leading to internal bleeding.

● The oil spill drama received extensive national and international support and media coverage.

● Project Penguin was the biggest evacuation and rescue operation ever undertaken of a single species. Research shows that oiled African penguins can be successfully cleaned and returned to their colonies. Most rehabilitated birds have a breeding rate equal to that of uncontaminated birds. No other species has a better record of survival in similar situations.

welcome Home Guys!

New fields of employment

...**land protection**: **prevention of risks** (flood, landslides, geological instabilities); safety measures for land and illegal dumping places; environmental engineering, **Environmental Impact Assessment**; land restoration; restoration, re-naturalisation of quarries and abusive dumps; land management, **protection of the natural environment**: water collection and treatment, **water, air and soil purification**; environmental management and security; forest engineering; environmental assessment of sites; industrial production control; **management of protected areas**; **ecological budgets**; life cycle analysis; environmental education and training; sea biology; environmental regulations, **waste: separate waste**, waste reduction; collection/recycling of waste, biological agriculture, **tourism/leisure activities**: cultural services, educational and training services; farm holidays; revitalisation of historical centres; **natural parks**; revitalisation and conservation of artistic cultural and archaeological goods; **renewal of urban/metropolitan areas**: new **technologies** in production processes, energy saving, **Certification of Quality: EMAS/ISO 14001**

Cities need to attract and to invest...

...**investments** in the transport sector; investments in waste, water, natural resources recycling, in water/sewage system, in the ecological efficiency of technical/energy plants, in the new technologies for renewable energies.

Success depends on the level of **integration** reached through consensus-building/participation/co-ordination processes. Cities should attract new partnerships with private and social actors and stimulate new employment.

As a matter of fact, employment is a central element of human sustainable development.

Co-operation among enterprises and consumers makes the environment protection "convenient", by stimulating a new viewpoint of consumers and recognises the protection of the environment as a **new economic opportunity**, "a matrix of innovation".

ICLEI
Local
Governments
for Sustainability

Cities compete...

Cities compete more and more to obtain investments and employment.

Cities are persistently suffering from unemployment.

This has generated various responses from the side of policy-makers.

The aim is to give greater recognition of unique/specific elements. Cities tend to invest in renewal (of images and spaces) to become more and more competitive and increase their attraction capacity.

The environment becomes source of employment.

European Sustainability Framework *Main up-date*

- **The EU Urban Thematic Strategy (2005)**
 - **The Territorial Agenda (2008)**
 - **The Aalborg Commitments (2004)**
 - **The 6th Environmental Action Plan**
 - **The EU Sustainable Development Strategy (2006)**

What was at the stake?
Starting conditions

EU Sustainability Development Strategy

The EU has still to face unsustainable trends (climate change, transport, health, poverty, social exclusion etc.), which have not been reversed or stopped yet, therefore substantial renewal of the 2001 Göteborg EU Strategy on Sustainable Development (EU SDS) was needed

ICLEI
Local
Governments
for Sustainability

Innovative and talented cities

The re-launched strategy for jobs and growth, the **Lisbon Strategy** refocus priorities on jobs and growth. Under the Lisbon Strategy, the human concerns are separated into three main categories: **innovation**, as the motor for economic change, the **learning economy**, **social** and **environmental renewal**.

ICLEI
Local
Governments
for Sustainability

The Lisbon Strategy & the Sustainable Development Strategy

Without sustainable development and social inclusion, no economic growth is possible.

Innovation and creativity are motors of a more dynamic economy.

- cross-departmental working and creativity in policy-making
- mainstreaming in the “way of doing things”
- dialogue-oriented approach (governance)

European Council
June 2006

EU Sustainability Development Strategy supports signature to the Aalborg Commitments

“ With regard to the important role of local and regional levels in delivering sustainable development and building up social capital, it is the overall aim to build sustainable communities in urban and rural areas where citizens live and work and jointly create a high quality of life. Approaches like **Local Agenda 21** and other processes with broad public participation must be further strengthened and promoted. Municipalities, cities and towns should be invited to sign and implement the **Aalborg Commitments**. Networks at different levels should support these activities. In this connection the Commission is invited to elaborate possible options of how to promote the ‘**European Sustainable Cities & Towns Campaign**’ which provides an exchange of good practice including the elaboration of quality criteria, indicators and instruments”

European Council
June 2006

**Thematic Strategy on the Urban Environment supports
Agenda 21, Aalborg Commitments, and integrated management**

“ Welcomes the approach of the Thematic Strategy on the Urban Environment to highlighting the importance of public participation in decision-making and the role that existing voluntary initiatives can play; invites the Commission to provide support and impetus for public participation, in particular by actively facilitating and promoting **Local Agenda 21 and the **Aalborg Commitments**”.**

“Appreciates that the Commission will provide technical guidance in 2006 on **integrated environmental management, including environmental objectives, measures and instruments, by giving examples of good practice and referring to the relevant EU environmental legislation”**

paragraphs 6 and 7

ICLEI
Local
Governments
for Sustainability

Sustainability from the bottom

Aalborg Charter:

- ◆ Principles for sustainability
- ◆ Local action (A21L)

1994

2004

Aalborg Commitments:

- ◆ 10 fields of action
- ◆ Definition of targets

Seville Spirit:

- ◆ Accelerate the implementation of the Aalborg Commitments
- ◆ Partnership with the EU Commission

2007

ICLEI
Local
Governments
for Sustainability

Agenda 21: What has been achieved ? A European story of creativity

- 1994-2004 Embracing the Aalborg Charter: from 80 to 2300 signatories
- 10 years Local Agenda 21: 6500 worldwide, 5200 in Europe
- Increased political support : EU, local government networks, national states (UK, Germany, Netherlands, Scandinavia, Italy, Spain, France)

ICLEI
Local
Governments
for Sustainability

What is the route?

Two main (and complementary?) trends

Local Agenda 21

**Environmental
Management Systems**

AALBORG COMMITMENTS

**THEME 1
GOVERNANCE**

**THEME 2
MANAGEMENT**

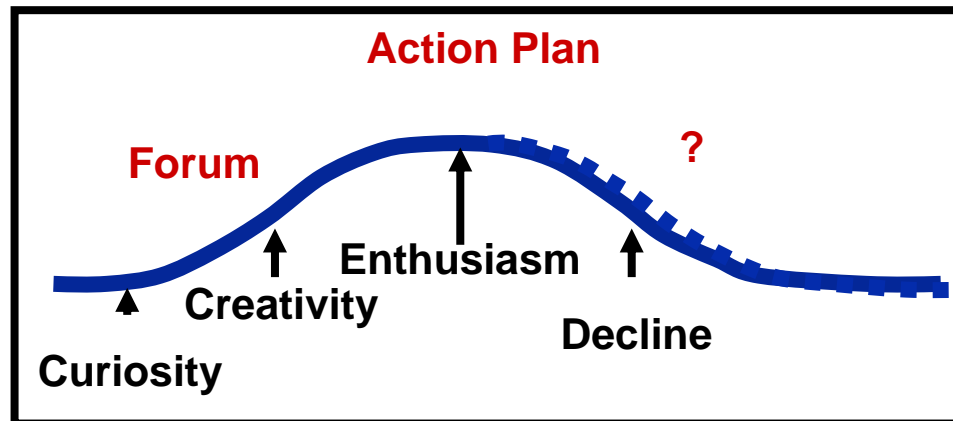

ICLEI
Local
Governments
for Sustainability

What is happening with Local Agenda 21?

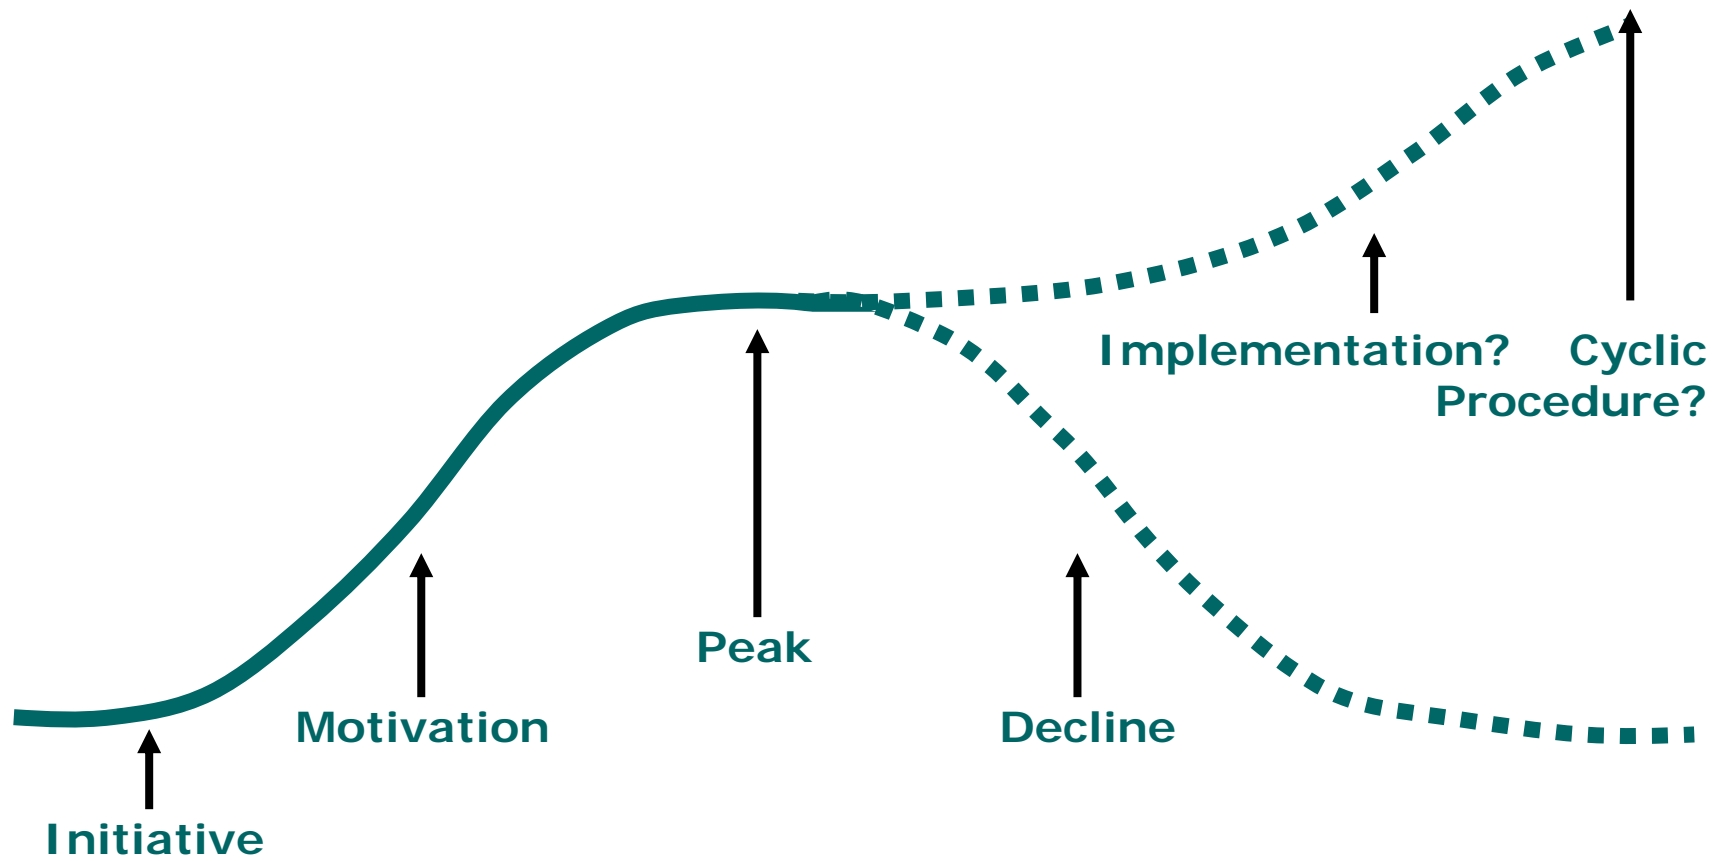

Declining, especially in Northern Europe

- Lack of representativity?
- Lack of quantitative goals?
- Lack of a cyclical approach?

Motivate local sustainability *Principles*

ICLEI
Local
Governments
for Sustainability

Motivate local sustainability *Principles*

Periodic cycles

... Assure continuity

ICLEI
Local
Governments
for Sustainability

What is happening with Environmental Management Systems?

- 2000, European Commission:
goal: 10,000 EMAS certified local authorities by 2005
- But the local authorities doing it are more than 260

Reasons for slow increase?

- Bureaucracy
- Costs
- Lack of quantitative goals
- Lack of citizens' participation
- Lack of politicians' (!) participation
- Local authority is not an enterprise

Time for a new approach?

Need for integration of management and governance,
through tools and processes

- cyclic
- with quantitative objectives
- participatory
- with political legitimacy
- applied to whole community and territory

ICLEI
Local
Governments
for Sustainability

Key Objectives

- ✓ improve the environments and the environmental impacts of European cities through **better implementation** of management systems
- ✓ elaborate and test an **integrated management system** for local governments to achieve a community based, integrated, practical and efficient management system for the environment applicable to the **whole urban area**
- ✓ solutions will be **applicable** to all cities in Europe

ICLEI
Local
Governments
for Sustainability

... in the cities?

Cities have:

- EMAS registration
- CLEAR
- *eco*BUDGET
- Aalborg Commitments
- Waste Plan
- Traffic Plan
- Energy Plan
- Education centres
- Social Balance
- ...

The Sustainability Cycle

The Sustainability Cycle

The Sustainability Cycle

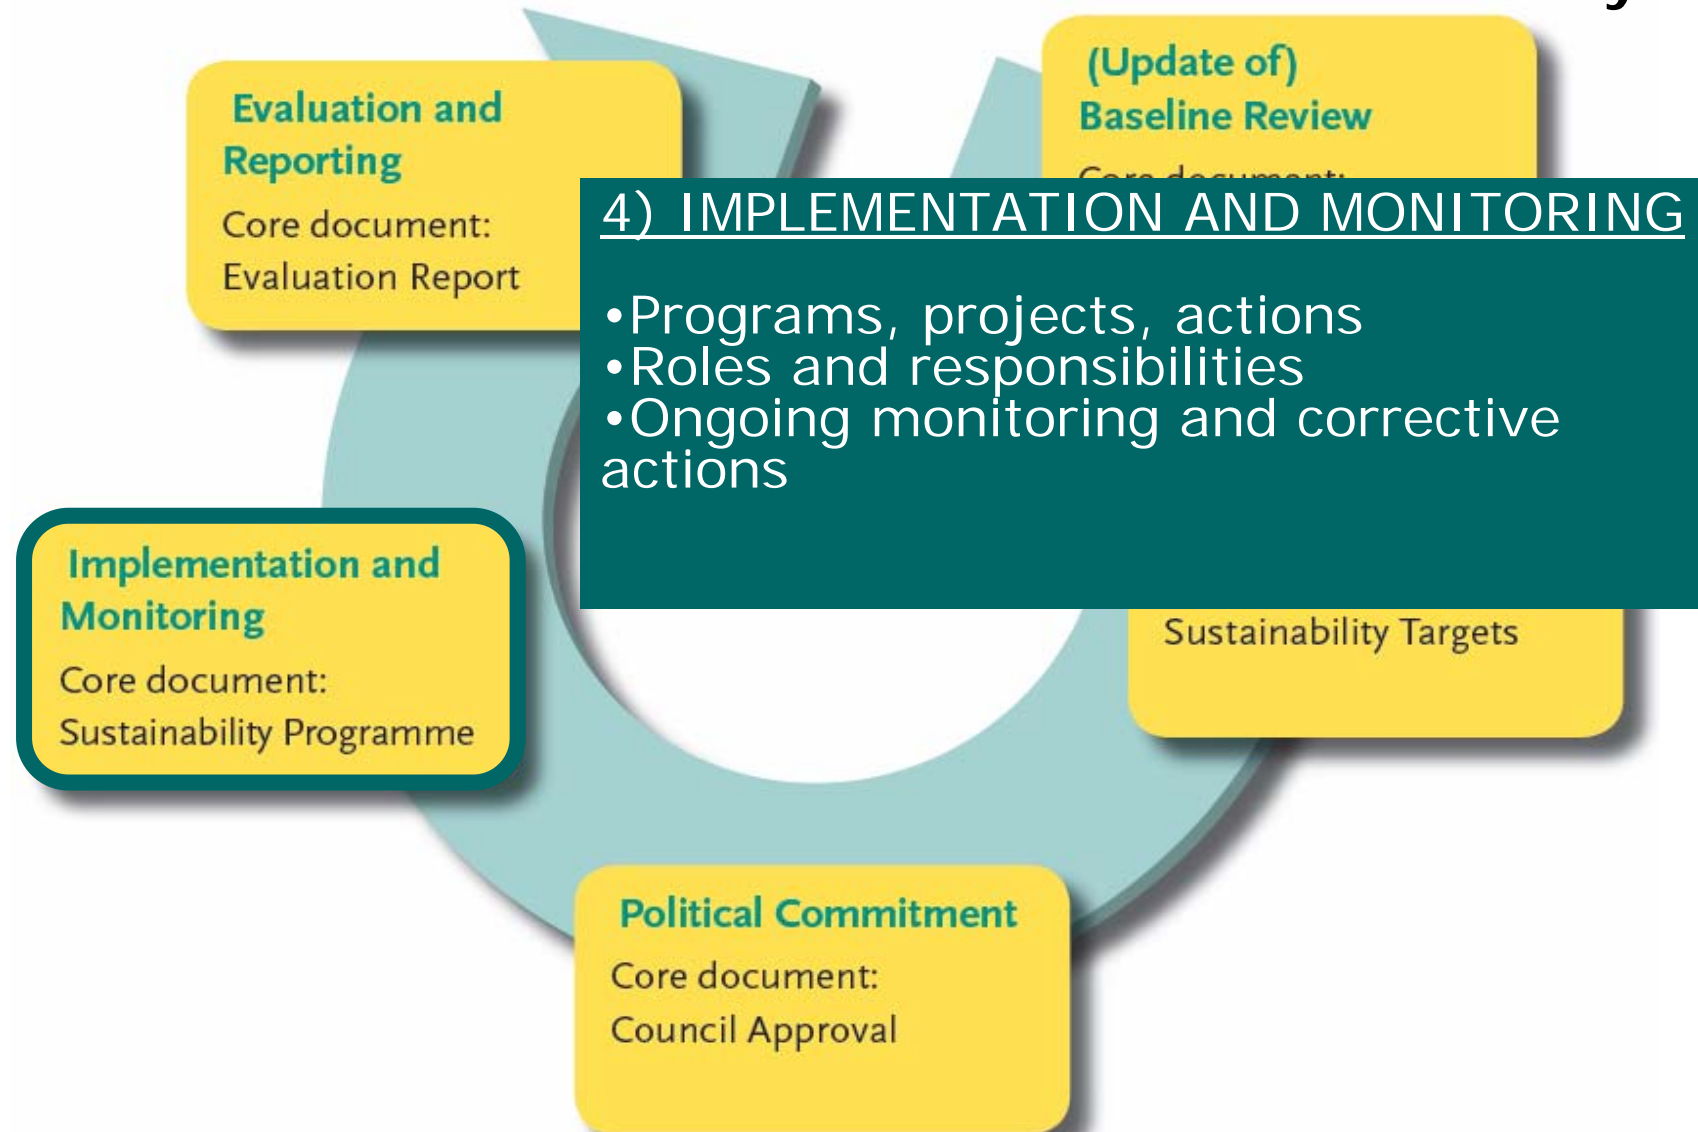

The Sustainability Cycle

The Sustainability Cycle

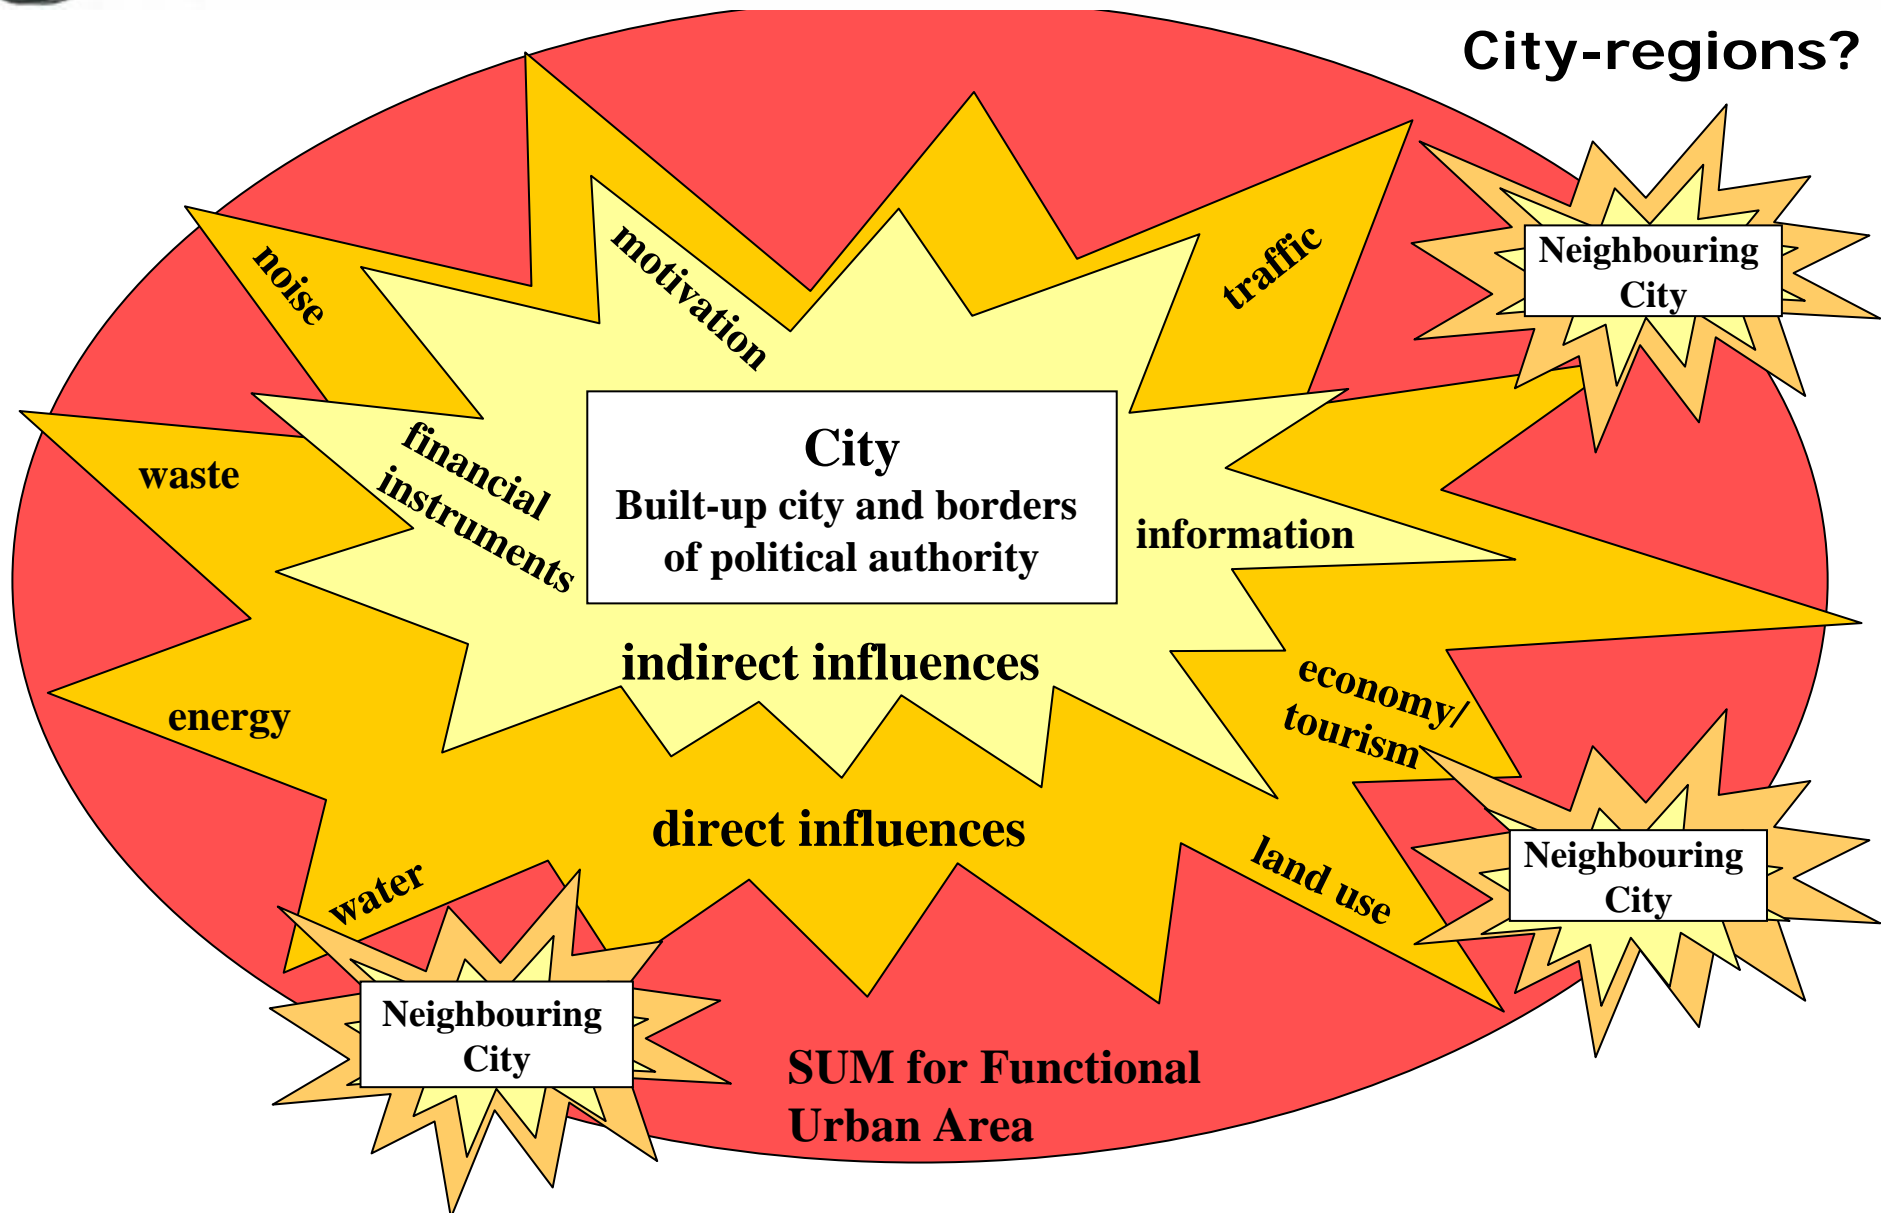

The Sustainability Cycle

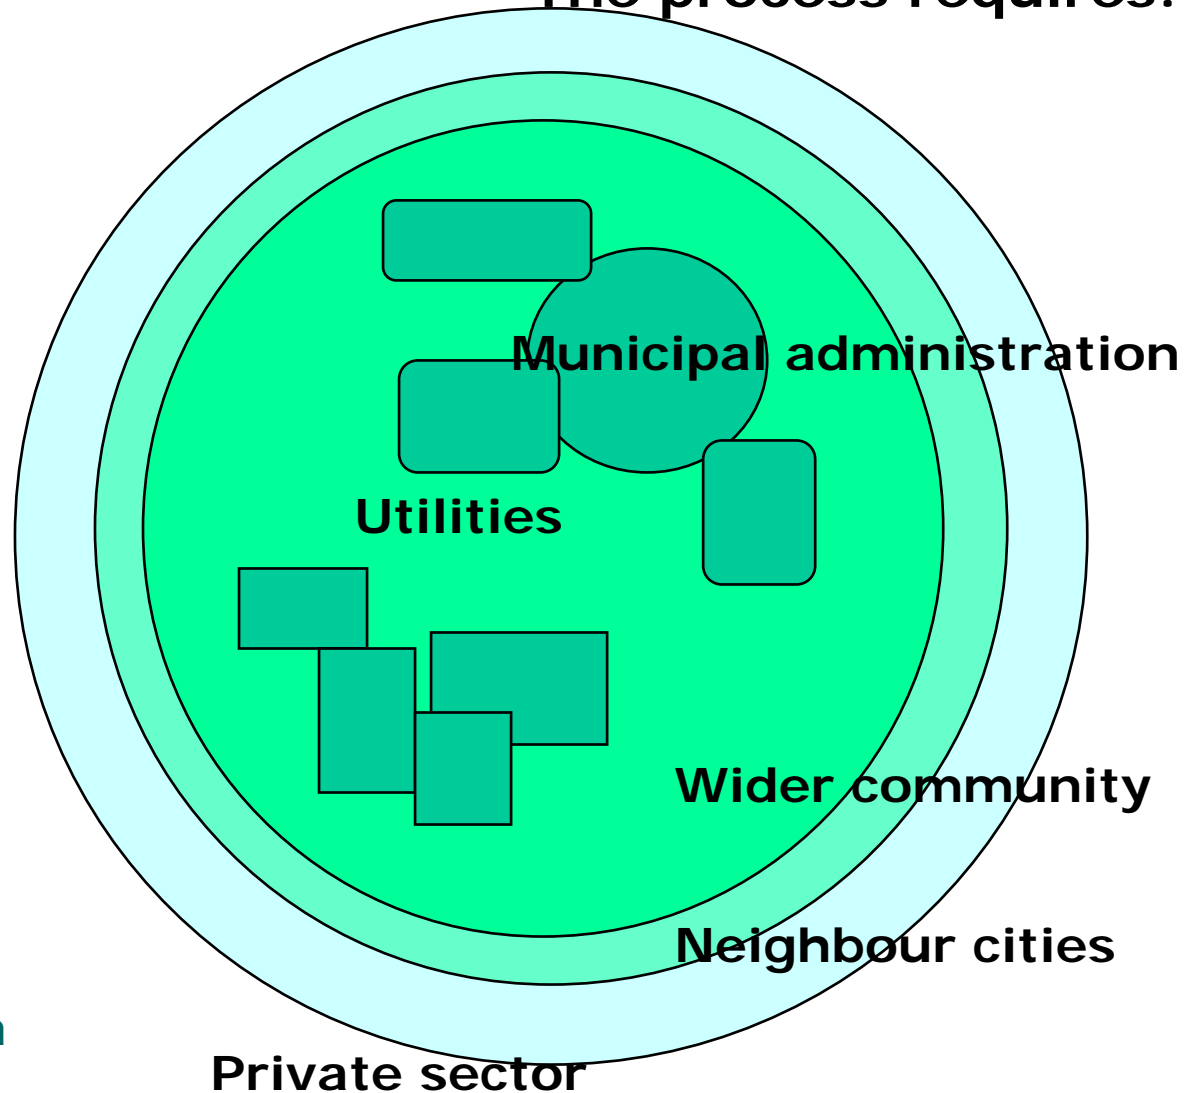

City-regions?

The process requires:

- good local political leadership
- time to build political relationships
- maturity on the part of local authorities
 - willingness by smaller local authorities to recognize the key economic and political role of the core local authority
 - and from the larger local authorities so that smaller places do not fear that their long term economic interests will be neglected

Integrated Management

In response to the need for an integrated approach, cities developed a core of standardised and harmonised generic model that with appropriate adjustment is applicable to cities in all Member States.

The IDEMS model:

- mainstreams in the “way of doing things”
- guarantees a dialogue-oriented approach and cross-departmental working
- can provide a “generic language”
- plays the role of a bridge between policies and actions
- will decrease the gap between vision and implementation

The model will provide national decision-makers with a methodology to facilitate the fulfilment of the Member States obligations towards the EU policy.
